

# Assay of L-Trp and L-Kyn

Target: L-Tryptophan (L-Trp)

L-Kynurenone (L-Kyn)

Use: L-Trp and L-Kyn as candidate biomarker for immune checkpoint inhibitor (IDO inhibitor)

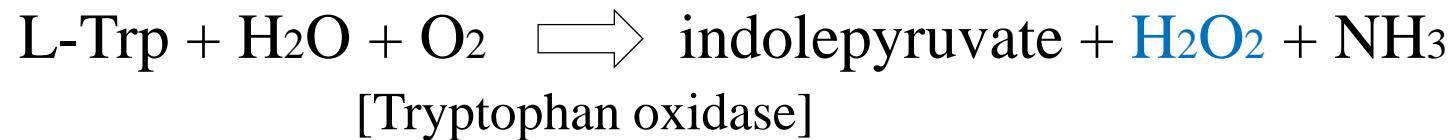

Method: **Enzymatic** method

(High speed and sensitivity analysis with absorbance between 340-800nm)

IDO: Indoleamine 2,3-dioxygenase

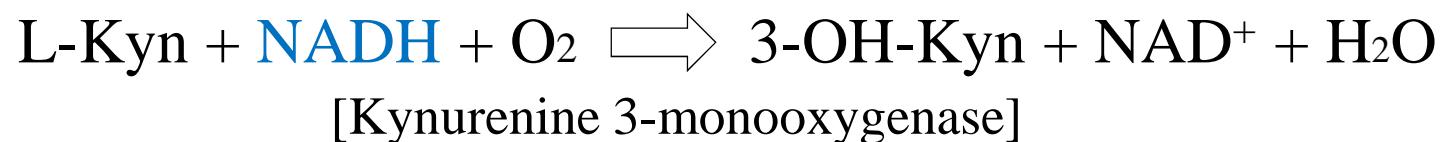

## ■Enzyme reaction and assay principle

### ●L-Tryptophan (L-Trp)

\*Measure H<sub>2</sub>O<sub>2</sub> concentration with colorimetric method using peroxidase.

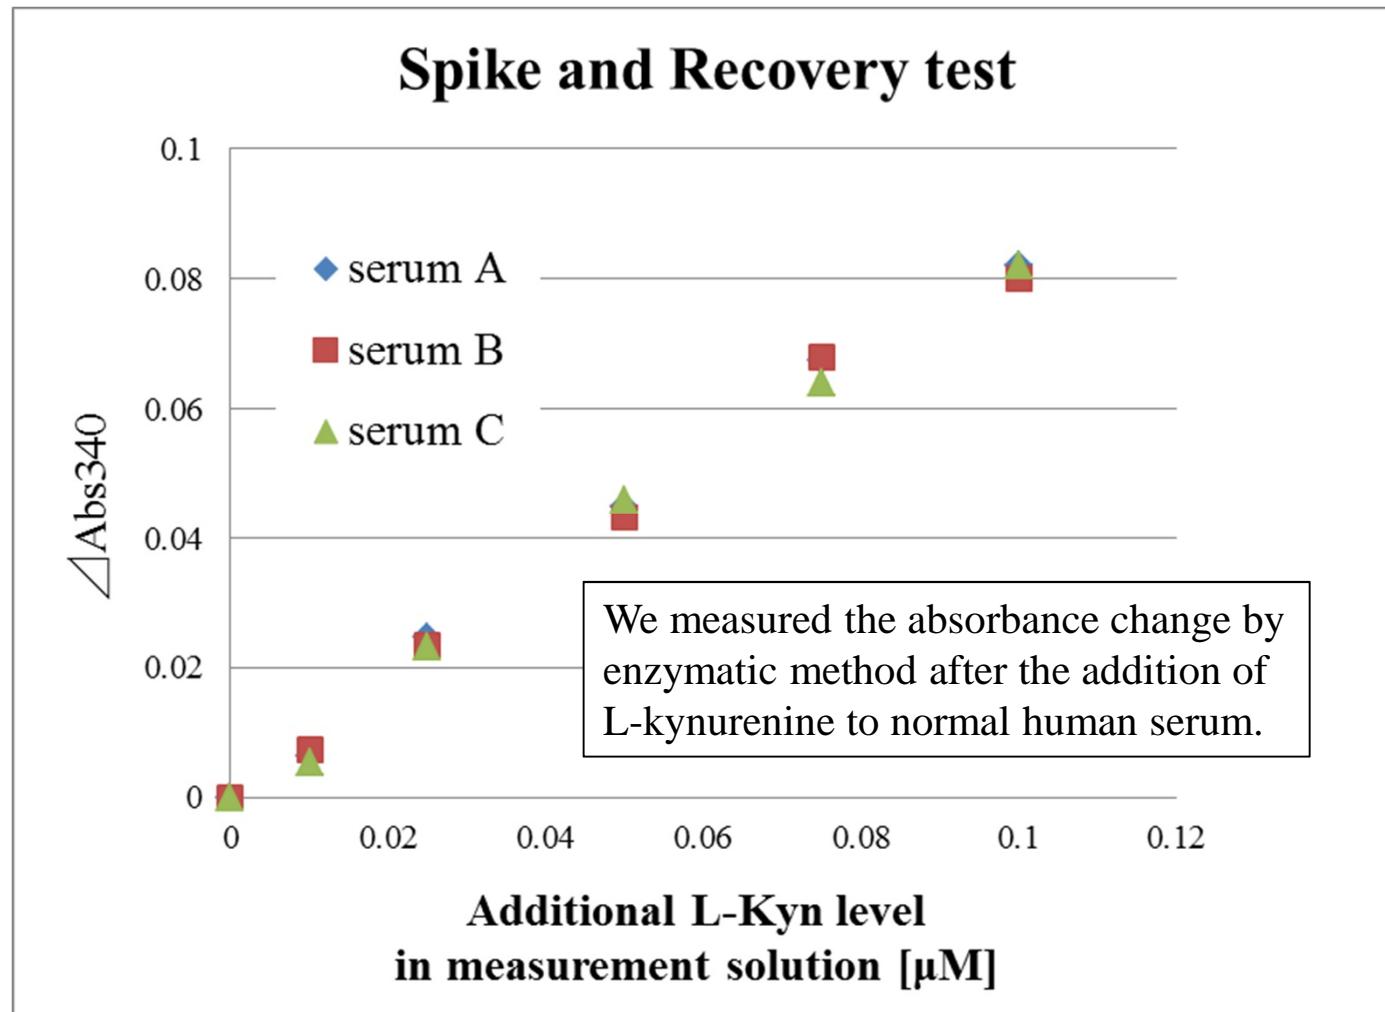

### ●L-Kynurenine (L-Kyn)

\*Measure the decrease of NADH with **high speed and sensitivity** by combining unique enzyme reaction under development.

3-OH-Kyn: 3-Hydroxykynurenine

## ■ Example of L-Kyn assay (under development)

**If you are interested in our enzymatic method, please contact us.**
